

Exercise 3: Events

Winter Term 2018/19

The lecture was about several events that are being send between various windows in a graphical user interface. Under the X11 window system, the command `xev` reports all events that are sent to a particular window.

- Unit 1:** Start the command `xev` and note all the incoming events.
- Unit 2:** Which types of events are received (at least 10)?
- Unit 3:** What is denoted by the additional parameters?
- Unit 4:** What are the events that are initiated by the mouse buttons?

Have fun, Theo and Ralf
