Exercise 23

1 `std::sort`

1. use `std::sort` instead of own sort function to sort your vectors. What are iterators?
2. Sort only the first half of the vector.
3. sort the second half of the vector backwards.
4. macht die vector-Ausgabe mit `for_each`.

2 integral revisited

Is it possible to use `for_each` for the integration excersice? If yes, how?

Have fun!
